# FEATURES AND BENEFITS

## Antibacterial Interiors

Stainless steel interiors are treated mechanically to reach maximum smoothness and inhibit bacteria growth. Absence of sharp corners and interstices simplifies cleaning, eliminating spots where food specks could be hard-to-reach.

## Soft Closing Systems

State-of-the-art devices ensure silent and soft closing of doors and drawers, every time and with the slightest touch.

## EvenLift™

EvenLift™ shelves, a standard fitting on all models (except Brilliance Series), can be adjusted at any height of the fridge compartment, thanks to Fhiaba's patented sliding device. Shelves can be rearranged in just a few seconds without removing them from the fridge or emptying them from their content.

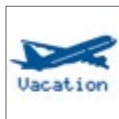

## Anti-Vibration

Full protection from vibration thanks to effective compressor insulation and by soft closing systems on each and every wooden shelf to protect bottles from shocks.

## Humidity Control

Through Fhiaba Access Menu it is possible to select the desired humidity level: low, high or medium, to ensure the correct preservation of corks, a key element to the correct preservation of every fine bottle of wine.

## Vacation

In order to minimize energy consumption during short vacation periods, activation of the Vacation function is highly suggested. It will limit compressors' work to optimize preservation and consumption. User can select the length of vacation period.

## Three Layers of Protection

Fhiaba Wine Cellars are the only ones featuring a glass door with 3-panels of bronzed glass to guarantee maximum protection from UV rays and sudden temperature changes of the external environment.

## Riserva™

Not a simple wine cooler: thanks to its precise temperature and humidity levels control system, Fhiaba's Riserva compartment is suitable for the preservation and ageing of fine red wines.

## Integrated Water Filter

The integrated water filter system guarantees bacteria free water thanks to the clever positioning of the filter cartridge inside the fridge compartment at low temperature. If ice consumption slows down, an automatic cleaning cycle will eliminate water stagnation in the system thus ensuring the highest quality of ice.

*Thank you for considering a genuine Fhiaba product for your home.*

# YOUR OWN LUXURY

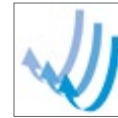

## TriMode™

Fridge, Fresco or Freezer: choose the function of the Bottom Drawers through Fhiaba Access menu and modify the operating temperature. This adds flexibility, especially if more units are combined in one system.

## OptiView™

Two LED arrays light the refrigerator from above, while individual spot lights illuminate distinct areas of the fridge compartment, Fresco and TriMode drawers. LED lights are virtually everlasting with minimal energy consumption.

## ProVent™

Independent ventilation in each compartment and an even distribution of the cold air flow allow for uniform temperatures ensuring better preservation conditions.

## TriPro™

Two compressors and three evaporators are the heart of Fhiaba's triple refrigeration system which, in combination with compartment separation, guarantees maximum freshness, preserving each food product at dedicated temperatures.

## EquiLance™

Dual-movement patented hinge combines technology and design. Its self-balancing movement guarantees stability and resistance to infinite openings and allows for flush installation of all of Fhiaba's models.

## Fresco™

The only "0 degree" drawer with a dedicated refrigeration system to control humidity and temperature levels. Low temperatures slow down the deteriorating process, and correct humidity levels prevent the loss of water in fresh foods, both resulting in a drastically longer preservation and higher quality of foods.

## Ice Maker

Fhiaba's ice maker is fully automatic: a sensor controls the ice level in the dedicated drawer and begins/stops ice production. Thanks to the integrated water filtering system, ice cubes are always clear, odorless and tasteless.

## Total No Frost

100% automatic system that eliminates the need for Fridge, Fresco and Freezer defrosting. It also allows a quicker return to normal operating temperature thanks to a significant refrigerating speed.
