ASKO dishwashers

Our heritage is our future

In 1950, Karl Erik Andersson decided to build his mother a washing machine. To create the best possible durability and washing performance, he refused to compromise on materials. The result was a washing machine crafted from solid stainless steel, standing on four cast iron legs. It was a design so superior it was taken into production not long after. Since then, ASKO has made its way into millions of households and professional spaces. Innovation driven by craftsmanship and a deep understanding of customer needs has made ASKO's products some of the best on the market. What makes ASKO so unique is its use of professional standards to create domestic kitchen and laundry products.

Thank you for choosing ASKO!

Introduction

Heritage	2
Load Capacity	4
Cutlery Tray	6
Upper Basket	8
Middle Basket	10
Lower Basket	12
Dishwasher Features	14
Dishwasher Models	18

The world's largest loading capacity

Our rack system's unique features make us the world leader in dishwasher capacity. Our XXL dishwashers can wash as many as 17 place settings with perfect cleaning and drying results.

17 place settings – how much is that?

17 Dinner plates	17 Glasses	17 Teaspoons
17 Salad plates	17 Forks	3 Bowls
17 Dessert plates	17 Knives	1 Meat dish
17 Saucers	17 Tablespoons	2 serving spoons
17 Cups	17 Dessert spoons	1 serving fork

Total: 194 individual items

Cutlery Tray

Flexible cutlery tray

Large enough for sixteen cutlery sets and with its own spray arm, the cutlery tray ensures every utensil comes out brilliantly clean. The tray is optimized to make room for tall glasses in the upper basket, but it can be completely removed if more space is required.

Unique Instant Lift™ height adjustment system offers flexible configurations for high and low loads.

The spray arm provides optimal washing results.

Features detachable and completely removable basket.

Upper Basket

Customize to your dishes

Adjust our exclusive upper basket for each load's unique needs. Place wine glasses in the folding and detachable holders. Set plates in the rack, or collapse the tines and load with deep casserole dishes. To create additional space for tall items below, simply raise the upper basket.

Divisible to double your options

The tine rows and one of the wine glass racks in our upper baskets can be divided, offering more flexibility for mixed loads.

Light Lock™ stabilizes lightweight objects, like plastic bowls.

Protect and clean knives with the extra-wide knife supports and guard.

Middle Basket

No more difficult loads

Some items like bowls, cups and ladles are harder to load than others. The middle basket has been designed with this in mind. The basket is divided into two removable sections: one for larger utensils and one for bowls. There is a perfect spot for every item and a perfect result after every wash.

Perfect for breakfast bowls and large kitchen utensils.

An ergonomic, integrated handle is built into the front of the basket.

Telescopic sliding rails track smoothly and noiselessly.

Lower Basket

Strong and flexible

Our exclusive lower basket offers maximum flexibility and stability with divisible and foldable tines. This ensures a safe and efficient wash for both small and large plates. All parts in our baskets are made from high-quality steel, and therefore create flexible basket solutions that are extremely durable.

Adjustable tine rows maximize flexibility.

Load large plates with ease.

Two specialized Power Zones™

For improved performance, the lower basket features two high-pressure Power Zones™. Wide Spray™ offers extra-efficient washing of pots and pans. The pressurized water jet and wide-dispersal nozzle increase the washing power and water coverage. Jet Spray™ expertly cleans tall, narrow objects, such as baby bottles and vases.

Dishwasher Features

Turbo Drying™ dries quickly and efficiently

With a 25% increase in airflow, the enhanced ASKO Turbo Drying™ system ensures every dish, glass, and piece of cutlery is completely dry.

Self-cleaning for improved performance

The Super Cleaning System+™ thoroughly cleans the tub, water recycling tank, and spray system to improve both washing performance and the machine's longevity.

Sanitize program for deep cleaning

Raising the water temperature to 158°F during the main program and above 158°F for three minutes of the final rinse program, the sanitize program deodorizes and prevents bacteria growth on baby bottles, canning jars, and cutting boards.

Seamless, full-size steel door design

Made from a single sheet of stainless steel, ASKO dishwashers have true full fronts with no division between the door and panel. Each corner is carefully folded and seamlessly welded. Delicate, all-metal buttons and an LCD digital display control the dishwasher's settings and programs.

8 Steel

We produce our dishwashers with eight of the most important components made of high-quality steel rather than plastic, such as: container, loading racks, spray pipe, spray arms, strainers, outer base, feet, and inner door.

A shortcut to clean dishes

Enhance your favorite dishwashing program with modes that reduce cycle time, noise, and water and energy consumption. Simply choose the appropriate mode and press start.

Green mode

Reducing the temperature and extending each cycle stage, green mode saves both water and energy while achieving the same perfect washing results as a normal program.

Speed mode

For clean dishes in 50% less time, simply select speed mode. This mode uses more water and energy to achieve the best washing results in reduced time.

Intensive mode

Intensive mode increases the spray arm pressure and uses more heat and water to remove dried-on food.

Night mode

Night mode increases the program time and decreases water pressure to reduce noise by as much as two dB.
